Foundational Blockchain

The Pawg token leverages the Binance Smart Chain (BSC), a high-performance blockchain built by Binance to facilitate fast and low-cost transactions. BSC operates using a Proof of Stake Authority (PoSA) consensus mechanism, which combines Proof of Stake (PoS) and Proof of Authority (PoA) to achieve consensus efficiently. With its EVM-compatible environment, BSC allows for seamless integration with Ethereum-based projects while offering higher throughput and lower fees. By choosing BSC as our underlying blockchain technology, Pawg ensures scalability, interoperability, and accessibility for users, enabling a smooth and efficient experience within our ecosystem.
